

Next JS Developer Skill Test (React)

Description:

This is what you'll be doing:

- Design, develop and test UI for mobile and web apps
- Convert designs into ReactJS components and translate project requirements into functional code
- Create effective, reusable code and libraries
- Configure front-end and back-end validations
- Identify and troubleshoot interface software and application issues
- Run unit and integration testing of the application to ensure responsiveness of the user interface design
- Keep documentation of application updates and monitor application performance
- Stick to architectural compliance, functional accuracy validation, and application development best practices

Requirements:

To move forward in the application process you should have at least all of these:

- Bachelor's/Master's degree in Engineering, Computer Science, or IT (or equivalent experience)
- 2-4 years of experience in web application development
- Proficiency in Postgres
- Proficiency in NextJS, React.js, Node.js, RESTful web services, HTML, CSS, etc.
- Extensive experience with JavaScript and EcmaScript6, React.js workflows like Flux or Redux
- Profound experience in developing next-generation scalable web applications
- Knowledge of mobile-first responsive design and implementation
- Strong understanding of data structures, algorithms, object-oriented designs and patterns

Benefits:

- Fully remote with office optional. You decide when you would like to work from home and when from the office.
- Flexible timings. You decide your work schedule.
- Medical Insurance
- Company laptop
- Paid leaves
- Gym allowance
- Market competitive salaries
- Home office allowance
- Annual company retreat
